

GLIS-3000

Overview

GLIS-3000 is a desktop diamond verification instrument for loose and mounted diamonds, designed to separate natural diamonds from synthetic diamonds. GLIS-3000 is manually operated and requires the user to interpret the test results.

GLIS-3000 captures multiple images and based on visual analysis of the images, and support from a decision tool, the operator concludes the nature of the stones. The following results can be concluded by the operator based on the data generated by the GLIS-3000:

- i) Natural type Ia diamond
- ii) HPHT synthetic diamond
- iii) Refer

'Refer' could indicate potential synthetic diamonds and diamonds. The referrals should be tested further for full verification.
