GLIS-Mini

Overview

GLIS-Mini is a desktop diamond verification instrument for loose and mounted diamonds, designed to separate natural diamonds from synthetic diamonds and diamond simulants. GLIS-Mini is manually operated and requires the user to interpret the test results.

GLIS-Mini captures multiple images and based on visual analysis of the images, and support from a decision tool, the operator concludes the nature of the stones. The following results can be concluded by the operator based on the data generated by the GLIS-Mini:

i) Pass - natural diamond
ii) Refer

'Refer' could indicate potential synthetic diamonds, diamond simulants and diamonds. The referrals should be tested further for full verification.
